Cloud & DevOps Engineer* Cape Town

The development of individual software solutions is not only our work – it is our passion. We are enthusiastic about tricky tasks, develop creative solutions and solve the challenges of our customers from different industries together. In an Accso team, you can contribute as you are and constantly develop yourself further.

We are looking for motivated, smart Cloud & DevOps talents! With us, you can provide the impetus and shape the platform of tomorrow together with us! Because we can't do it

without people whose hearts beat completely for IT and cloud topics. If you are also passionate about Cloud & DevOps, join our team in Cape Town!

What awaits you:

- You have more than 5 years of work experience relevant for the position.

- DevOps is much more than just a modern method for you? For you it is a mindset! You accompany the conception, development and optimization of innovative software solutions, ensure the quality of these solutions and take quality-enhancing measures

- The modern technology mix is your home and "Infrastructure as Code", "Immutable-Infrastructure" and "Cloud Computing" are your passion!

- Golden images are out! When you set up cloud infrastructures, they are captured and reusable with Infrastructure as Code in Cloudformation, CDK, Terraform, Helm, etc

- You advise our customers on cloud infrastructures (e.g. Docker, Kubernetes, Prometheus, Elasticsearch...), design and are responsible for the software delivery processes at the customer's site and ensure compliance with them

- Monitor(ing) is more than just a display: If an environment is down, you'll be the first to know. You take care of the configurations of the development and runtime environment and monitor the customer's platforms (dev, acceptance, production)

- Tired of typing or doing things multiple times? So are we! You automate the build of our software and infrastructure via our CI/CD pipelines

- You do not keep your knowledge behind the scenes. In fact, you actively contribute your ideas to our cloud community and dev-ops community and promote the exchange with cloud enthusiasts and deal with current trends and topics

- P.S.: We are constantly developing you at Accso and offer you the opportunity to take certifications with the cloud providers! E.g. the Certified Solutions Architect at AWS

What sets you apart:

- Get involved, shape the cloud future together with us and grow beyond yourself! Inspire us with your passion and motivation for cloud topics!

- You're not an expert and don't have much cloud experience? No problem, the keyword is learning by doing. We offer you the opportunity to work with the cloud and are happy to help you with retraining and training to become a cloud expert

- You have a bachelor's or master's degree in computer science, are an IT specialist or have successfully completed a comparable training program

- Your DNA: as a pioneer for new technologies and team player in agile projects, you bring the platform experience in development and DevOps-based methods on at least one of the major cloud platforms (AWS, Azure, Google Cloud Platform)

- Ideally, you already have experience in Terraform, CloudFormation, CDK and containers and experience with networks and common Linux operating systems

- You have programming skills (e.g. Python, Shell, Go) and knowledge of common automation tools

- A self-dependent and structured way of working, as well as communication skills and the ability to work in a team characterize you

What we offer:

- Flexible working hours: We won't torture you out at 5am if you're not an early birdie! We take your personal schedule and family commitments into consideration. You are also welcome to use one of our part-time models!

- 12 training days per year, which you can use for training, acquring certifications, onferences or our hackathons

- Are you passionate about one or more specific technical topics? Then get involved in our in-house, interest-based communities! Get involved in exciting projects that will help you, the team and Accso as a whole to grow!

- You are not a number in the system. We promise you that! You can expect fair treatment, appreciation, flat hierarchies and open communication at eye level

- Feel-good culture: fair treatment, appreciation, flat organisational structure and open communication on equal terms

- Discovery Medical Aid, business bike benefits and option of sabbaticals

- Modern offices, excellent equipment, height-adjustable desks, creative spaces, and more.

- Latest smartphone, laptop and anything else you need to work (also for private use).

- Memorable and family-friendly events, such as summer parties, game nights, Christmas parties and our own conference "AccsoCon"

It is not so important to us that you meet the job requirements 100%, but that you enrich our team with your talents, your knowledge and your nature and that we grow together. If you find yourself mostly in the job description and would like to start together with other accsonauts, we look forward to receiving your application.
